

 **HermanMiller** for Healthcare

Pharmacy

## Flexible responses for changing need

How will your pharmacy look in the future? How will it be working? What will the future operational requirements be? It is hard to believe that everything in the pharmacy area used to be managed manually, but, with technological advances and the development of digital medication delivery systems, things have moved on quickly.

The emphasis on patient-centred care and pharmacy system management is changing. New regulations, changes to work processes and quality programmes designed to meet local or national requirements have challenged existing methods of thinking and planning.

### **It is our business to understand yours**

Herman Miller for Healthcare® has been designing, planning and creating great places to heal for over 40 years. Our team of experts will work with you and your pharmacy professionals to create environments that support the delivery of quality patient care and function flawlessly both now and into the future.

### **Flexible environments for lasting value**

Modularity works with you to maximise your initial investment. Using a modular system enables you to incorporate new equipment, new technology, new systems of delivery and new procedures with little effort or expense.

Usually you will be able to use the same products in different configurations as needs change.

Products that can be used in a number of applications throughout the hospital also maximise your investment and reduce cost of ownership.

So with any changes, small or significant, your modular pharmacy system will flex and change with you.

### **Hardworking products for hardworking environments**

A hospital pharmacy is on-call, 24 hours a day. It needs robust products that work hard and work well. Our products and applications can improve the productivity of staff as well as the functioning of the facility. An efficient, effective pharmacy system will meet your initial needs and adapt with your requirements.

**Flexible and adjustable**

Panel-attached components adjust in 2.54cm (1-inch) increments, connect easily and can be readjusted without disassembling panels. A range of panel configurations and heights create a variety of layouts and meet different functional and aesthetic needs. You can supplement existing panels without needing to start over again.

**Cleanable even in the toughest environments**

Our products are designed for easy, frequent and robust cleaning. Durable thermoplastics resist chipping and scratching, and the integral colour keeps them looking good over time.

**Comfort and great ergonomics**

A choice of ergonomically designed, innovative seating, including stools, is offered in a number of options to suit working and functional requirements, wherever you are in the facility.

**Easy to update and change**

Flexible and integrated cable management allows for changes to be made easily without tear-down or disruption and controls the flow of cables and wires, keeping them off surfaces and the floor. Multiple access points make moving equipment easy. A wire chase rail attaches to panels in technology-intensive areas.

**Addresses specific work processes – including heavy-duty needs**

Height-adjustable, mobile process tables address the heavier-duty needs of the pharmacy and add valuable under-surface storage. Medication carts store and transport materials, and drawers and bins are interchangeable with pharmacy storage components. Stainless steel tables and wire carts meet clean room requirements.

**Efficient and accurate storage and organising**

From above to below the work surface, we offer an array of storage options. Work organisers attach to tiles, keeping items handy and surfaces clear and easier to clean.

All our storage and transport solutions can be configured to work exactly as you need and to move supplies on demand.

**You can choose your environment**

Our surface materials, colours and patterns can create a pleasant working environment even in highly functional areas. The many options allow you to support the work you need to do as well as maintain a great aesthetic.

**Getting the best return – refresh, don't replace**

Modular products can be refreshed as things change – whether that is because of aesthetics or function; individual components can be changed without replacing the entire pharmacy product.

**Space for breaks and meetings**

Our breadth of line supports areas within or adjacent to your pharmacy. You can easily create a break-out area or a meeting space with our tables, seating and other product ranges.

**Supporting administration**

Our administrative product ranges will support your requirements, while our desking, seating, storage and accessories complement your clinical area and complete the look and functionality of the modern pharmacy department.
